SUMMARY

Software Engineer with 2+ years building market data systems at Bloomberg, from database and caching layers through trader-facing applications on the Terminal. Background in compilers and systems programming.

EXPERIENCE

Bloomberg LP | Software Engineer

Mar 2024 – Present

- Architected and implemented strategic caching layers for a fixed income benchmark database processing over 1 billion daily queries, improving system response time by 40% and reducing database CPU usage by over 90%
- Built a money market analytics screen end-to-end, surfacing a cross-currency relative value matrix for traders, from UI through a service that computes those figures and publishes to subscribers every 30 seconds
- Consolidated decentralized legacy database writes spread across multiple offline tasks into a single real-time listener consuming row updates from an internal data pipe, centralizing the write path and improving data consistency
- Shipped a table visualization on the money market program description page breaking down amount outstanding by issuance currency with historical values, replacing a single aggregate figure and improving transparency of issuer-contributed data for traders
- Built Grafana dashboards monitoring key metrics across 188 fixed income databases and 50+ microservices organization-wide, enabling faster issue detection and reducing incident response time

UC Santa Cruz IT Services | Student Software Developer

Jan 2023 – Sep 2023

- Migrated a high-traffic poster printing service used by 16,000+ students and faculty to a modern web stack, improving system reliability and increasing successful order and payment completion rates through stronger error handling

NVIDIA Corporation | Software Engineer Intern

Jun 2021 – Aug 2021

- Designed and implemented an automated Code Review Framework for Perforce changelists, improving code quality for an organization of 20+ developers
- Contributed to GPU resource manager testing and debugging on Linux platforms, helping resolve a security bug

SKILLS

Languages & Tools: C, C++, Python, TypeScript, JavaScript, SQL, Docker, Linux, Git, Claude Code

Data & Infrastructure: PostgreSQL, Redis, Kafka, Comdb2

Testing & Observability: pytest, GoogleTest, Grafana

EDUCATION

Georgia Institute of Technology | M.S. Computer Science (OMSCS)

Aug 2026 – Expected 2029

Online, part-time

University of California Santa Cruz | B.S. Computer Science

Sep 2019 – Jun 2023

GPA: 3.89

Relevant Coursework: Compiler Design (Graduate Level), Computer System Design, Foundations of Programming Languages, Full Stack Software Development, Principles of Software Engineering

ORGANIZATIONS

Bloomberg LP, Fixed Income and Derivatives Engineering | Engineering Representative

Bloomberg LP, Latinx in Tech | Member

Society of Hispanic Professional Engineers, Professional Chapter | Member
